

JAVIERA RUDOLPH

R FOR ECOLOGY

WHO AM I?

- Grad student and quant ecologist
- I work with dispersal – simulations
- RLadies coorganizer

WHAT IS R?

Stack Overflow Traffic to Programming Languages

Based on visits to Stack Overflow questions from World Bank high-income countries.
The more-visited languages of Python, JavaScript, Java, C#, and PHP were omitted.

WHY LEARN R?

- Growth
<https://stackoverflow.blog/2017/10/10/impressive-growth-r/>
- Reproducibility
- Keeping up with the field
- Communicate with others

WHAT IS R STUDIO?

RStudio IDE :: CHEAT SHEET

Documents and Apps

Open Shiny, R Markdown, knitr, Sweave, LaTeX, .Rd files and more in Source Pane

Check spelling Render output Choose output format Choose output location Insert code chunk

Jump to previous chunk Jump to next chunk Run selected lines Publish to server Show file outline

Access markdown guide at **Help > Markdown Quick Reference**

Jump to chunk Set knitr chunk options Run this and all previous code chunks Run this code chunk

RStudio recognizes that files named **app.R**, **server.R**, **ui.R**, and **global.R** belong to a shiny app

Run app Choose location to view app Publish to shinyapps.io or server Manage publish accounts

Write Code

Navigate tabs Open in new window Save Find and replace Compile as notebook Run selected code

Cursors of shared users Re-run previous code Source with or without Echo Show file outline

Multiple cursors/column selection with **Alt + mouse drag**

Code diagnostics that appear in the margin. Hover over diagnostic symbols for details.

Syntax highlighting based on your file's extension

Tab completion to finish function names, file paths, arguments, and more.

Multi-language code snippets to quickly use common blocks of code.

Jump to function in file Change file type

Working Directory Maximize, minimize panes Press **↑** to see command history Drag pane boundaries

R Support

Import data with wizard History of past commands to run/copy Display .Rpres slideshows **File > New File > R Presentation**

Load workspace Save workspace Delete all saved objects Search inside environment

Choose environment to display from list of parent environments Display objects as list or grid

Displays saved objects by type with short description View in data viewer View function source code

Create folder Upload file Delete file Rename file Change directory

Path to displayed directory

A File browser keyed to your working directory. Click on file or directory name to open.

Pro Features

Share Project with Collaborators... Active shared collaborators

Start **new R Session** in current project

Close R Session in project

Select R Version

PROJECT SYSTEM
File > New Project

RStudio saves the call history, workspace, and working directory associated with a project. It reloads each when you re-open a project.

RStudio opens plots in a dedicated Plots pane

Navigate recent plots Open in window **Export plot** Delete plot Delete all plots

GUI Package manager lists every installed package

Install Packages Update Packages Create reproducible package library for your project

Click to load package with **library()**. Unclick to detach package with **detach()**

Package version installed Delete from library

Debug Mode

Open with **debug()**, **browser()**, or a breakpoint. RStudio will open the debugger mode when it encounters a breakpoint while executing code.

Launch debugger mode from origin of error

Open traceback to examine the functions that R called before the error occurred

Version Control with Git or SVN

Turn on at **Tools > Project Options > Git/SVN**

Stage files: Show file diff Commit staged files Push/Pull to remote View History

SCALARS, VECTORS, MATRICES AND LISTS

- **Scalars:** a single number
- **Vector:** a row of numbers
- **Matrix:** two-dimensional array of numbers
- **Data frame:** like a matrix but with names at the top of columns
- **Lists:** a collection of vectors, matrices or dataframes

USEFUL CONCEPTS

- What is a script?
 - Any file that has the extension **.R**
- What is a directory?
 - A location in your computer's system of files
- What is the working directory?
 - The folder in your computer where you are currently working and where files will be saved and accessed from.
- How do you set your working directory?
 - Session > Set working directory > choose directory
- What is a library? What is a package?
 - A package is the bundle of functions you can install. You load these packages using the `library()` function.
